BPC-157 Body Protection Compound Patch

<https://globalderm.co.za/product/body-protection-compound-patch/>

30 Day Supply 30 Patches R950

Precise Daily Dosage Delivery

Eliminates Injections

Formula Stability

Formula (Per Patch) 1 mg (milligram) of BPC-157 99% Purity

Description: From A as in "astaxanthin" to Z as in "zinc"... It seems, there's a supplement for everything. Everything but *active* tissue repair. Yes, a healthy diet, anti-inflammatory vitamins and related compounds may help you recover from everything, ranging from the inevitable daily wear and tear of our stressful lives to a debilitating injury, but no legally available supplement has actively promoted wound, bone and overall tissue healing. Until now...

BPC-157 is a naturally occurring anti-ulcer agent.

BPC-157 is small peptide (only 15 amino acids) that occurs naturally in our gastric juice, where its main function seems to be to kickstart and accelerate the renewal and repair of the constantly assaulted lining of our intestinal tract.

Benefits: BPC-157 works by promoting key growth factors and modulating the nitric oxide pathway – it is thus not the simply vascular endothelial growth factor (VEGF) analog it is often misrepresented as. Rather than acting like VEGF it will promote the complex physiological processes that occur during **wound healing and tissue regeneration and repair** - both inside and outside of the gastrointestinal tract, where VEGF and related growth factors as they are promoted by BPC-157 has been shown to:

- **Promote the regeneration of the cells of the intestinal wall (intestinal health)**

- **Promote and accelerate muscle, tendon and bone healing (sports and other tissue and bone injuries)**
- **Trigger the repair and replacement of atherosclerotic endothelial cells (cardiovascular health)**
- **Promote, optimize and accelerate wound healing (skin health and organ damage)**
- **Prevent and reverse lesions of the intestinal tract, liver, and even brain as they can occur in response to the (ab-)use of certain pain medications.**
- **Heal (stress-induced) ulcers and fistulas as they are increasingly common due to our stressful (this refers to "stress" as general oxidative stress)**
- **Serve as a remedy for a plethora of central nervous system disorders that originate in the gut by (a) the local repair of the intestinal lining and (b) direct neuroprotective effects in the brain.**

It's no wonder researchers decided to call this protein "**Body Protecting Compound**"

For people with Crohn's disease, IBS and other intestinal pathologies, for example, BPC-157 could literally be a life-saver - for everyone else a potentially health-promoting health-insurance, which acts on signaling pathways that have been implicated in heart and vascular health and seems to play a role in the etiology of vascular dementia, Alzheimer's. **BPC-157 has also generated significant attention within the athletic community because of its ability to battle muscular or tendon injuries!**

Why should you use a transdermal time-release patch for BPC-

157: Until the introduction of our new patch, the most common way to supplement with BPC-157 has been via injection or sublingual pills or liquid. These methods are problematical in that getting the correct daily dosage is difficult, and that BPC-157 is highly unstable in liquid form. Now with our new BPC-157 time-release transdermal patch, both of those issues are non-issues. The patch delivers the correct daily dosage over the 8-hour time-release function of the patch and our "formula-in-adhesive" patches insure 100% stability.

Here's where unique patch technology comes in. Having been developed to transport much larger peptides across the skin barrier, the new *BPC-157 Patches* will progressively release your daily dose of BPC-157 into the circulation. By placing the patch on or next to an injured muscle, tendon, or other damaged tissues, the patches also have a certain tissue-specificity that would otherwise be seen only with injectable peptides.

Patch application can be general or site specific: Depending on where you place the patch you can thus focus on either the systemic or the local effects of BPC-157. When placed directly on or close to an injury such as a torn hamstring, the injured tissue will benefit particularly from the regenerative capacity of the patch. If you place the patch on the upper arm, the shoulders or other common application areas where the skin is relatively thin and the patch's full 1mg of BCP-157 will predominantly pass into the bloodstream, BPC-157 will exert its organ-protective, pro-regenerative effects throughout your whole body.

If you plan on using the BCP-157 patch continuously, it is important to remember that it shares the same U-shaped dose-benefit ratio you may know from other growth factor releasing peptides. Accordingly, we cannot recommend mega-dosing BPC-157 by applying several patches at a time over longer time spans – not because there's proven evidence of harm, but rather because we don't have sufficient safety data, yet.

Moreover, being dosed at 1mg/patch our new BPC-157 Patch already contains a significantly higher amount of the potent tissue regenerator than you'd need to initiate the repair processes. In that, it is important to note that our unique time-release technology allows the BPC-157 level in your blood and tissue to remain decently stable over a 24h period thus reducing the risk of side effects due to acute overdosing while still optimizing all the physiological processes that critically depend on VEGF and related growth factors; from general organ and vascular health to muscle recovery and bone, tendon and ligament healing.

In other words, with our patch you will get the benefits of injectable BPC-157 without the hassle of having to inject it – all by applying a single small patch to your skin.

This patch is awesome for men and woman at any age!

Product Reviews

Review

This is the first time I have used a patch, I Have been using this patch just over 2 weeks and I am absolutely amazed by how quickly I am recovering from training, not only that little aches I have picked up over the years of training have disappeared, I can only attribute this to BPC-157 patch as that is all I've changed, with these effects being noticed I would have a safe bet the internal goodness off BPC-157 we can't measure is taking place to, excellent product, has certainly won my custom and loyalty.

Review

I have Crohn's and I read that BPC-157 may help to moderate Crohn's symptoms, so I

placed a 30-day order. I just placed a new 180-day order because I got relief by the time I used the second patch. I'm really impressed! Also, I called and spoke to a very well informed and polite person when I called the company to learn more about them.

Review

A few months ago, a friend of mine with serious digestive system issues told me how this patch moderated his symptoms dramatically. I have been using your BPC-157 patch for a few weeks and I can tell you it works!

Review

This patch is awesome! I ordered it to reduce my arthritis pain and it works! Now I'm going to try the Fat Burner patches because the results demonstrated that they are a credible company.

Review

Just wanted to say that I think your product is very good.

Although not as effective as injecting BP 157, which I have done for chronic golfers elbow, it really has helped me out during a flare after a martial arts injury. I had concerns over the molecular weight and whether it could actually penetrate via a transdermal but it certainly seems to be working although at a slower pace and not as effective as a subcutaneous local injection. Also your pricing is amazing which raised an eyebrow! It really has made me consider teething your other patches.

Review

WOW, I got the new BPC-157 patch a week ago and I am truly amazed! I recently had knee tendon surgery and I know for a fact that this patch is turbo charging the healing process for me.

Review

I changed from injections to this time release patch and I should have done it a long time ago. Your patch is wonderful. So easy to use and the price is right!

Review

I have always had problems with ulcers due to my stressful occupation. This patch has helped me very much!

Review

I had my second rotator cuff surgery a couple of months ago and purchased a 90-day supply of the BPC-157 patch to help speed up my recovery. This patch is awesome. I compare my first rehab without the BPC-157 to this most recent rehab and I'm amazed. Thank You

Review

No more injections for me! This patch is awesome!
